

Battery Reviver

(for Segway Format Li ion Batteries)
CE – 3 Consumer Edition

Features:

- Optimised for Consumer Use.
- Revives depleted Lithium Ion Battery Packs.
- Technical expertise is not required.
- Battery pack remains sealed and intact.
- 12 month warranty.
- Operates worldwide.

Package Includes:

- Battery Reviver.
- 3 mm T-handle wrench.
- Illustrated instructions.
- Global support & help facility.
 - Email
 - Telephone
 - Skype

Likely Expectations from a Battery Reviver:

Complex battery products may fail in a number of ways.
Realistic expectations from this Battery Reviver are:

- ✓ **Batteries that have been allowed to run flat can be revived.**
- ✗ **Failed, damaged or otherwise broken batteries CANNOT be revived.**
- ✗ **Batteries with damaged internal cells or damaged electronics CANNOT be revived.**
- ✗ **Worn out batteries CANNOT be revived.**

After the revival process, a number of simple and clear tests are performed to ascertain, beyond any reasonable doubt, that the revived battery is safe to use.

Our worldwide experience is that typically 50% of 'dead' batteries presented to Battery Reviver owners fall into the first category and can be successfully revived.

Some owners have reported success rates of 75% and even higher.

NOTE: Statistics will vary, perhaps better or perhaps worse, especially with small samples of batteries.

Proven Global Success:

DGB International, Lithium Ion Battery Revivers have been successfully used globally, including in:

- Asia Pacific
- Europe
- North America
- South America
- Africa
- Central America
- Middle East
- Australia

Our customers tell us that the most appealing characteristics of the DGB International, Battery Reviver product range include;

- The possibility to save the unnecessary cost of replacing some batteries.
- The ability to easily solve the battery problem promptly and locally, rather than having to ship heavy and hazardous batteries to a distant 'laboratory or solution location'.
- The comfort and confidence that comes with a detailed procedure, with simple measurements.
- Robust and safe-to-use electrical connectors.

The original DGB International, Battery Reviver Kit was optimised for operation by Segway dealers, who need regular use to support their customers.

This updated DGB International, low cost Battery Reviver CE is designed for simplified operation by consumers, who require limited use, and features;

- Fully automatic, microprocessor controlled operation.
- Limited use (revives 3 batteries).
- Clear Status Display.

Designed and manufactured
in Australia

Some Customer Feedback:

- "I earned the price back on the first day". (USA)
- "* Real Worthy Product * Successful Battery Revival *" (Germany)
- "very professional job with clear instructions .. an outstanding success" .. (UK)

Background Information:

The Lithium Ion batteries fitted to Segway PTs are capable of storing a lot of energy. Such a quantity of energy may be dangerous in uncontrolled circumstances. We observe that Segway has taken a number of 'controls' to ensure that batteries are always safe. One 'control' in particular, is that heavily depleted batteries are locked out of re-charge.

This is a safe and conservative approach, however when an otherwise good battery has been simply ignored and allowed to discharge, it must be replaced.

To overcome this problem we designed this Segway format, Battery Reviver CE, which allows consumers to safely test and revive such depleted batteries.

Legal Disclaimer:

This product is neither supported nor backed by Segway Inc.

Forward Looking Statement:

We continually strive to improve existing products, and to release new products. All customer feedback is welcomed.

We expect to release further 'Battery Reviver' range products in the foreseeable future.

Available internationally & locally from:

Battery Guidelines:

This product is specifically designed to revive Li-ion batteries that are used for the Segway PT. Use for any other application is discouraged.

AA, AB, AC series batteries:
may be used on generation 1, Segway HT only.

A4, AD, AE, AF series batteries:
may be used on either generation 1 or 2 HT / PTs.

Charge all stored batteries (revived or otherwise)
at least once per month.
